Allogeneic Adipose-derived Mesenchymal Stromal Cell Therapy for Cats with Inflammatory Bowel Disease

These researchers are investigating the usefulness of stem cells for treatment of inflammatory bowel disease, a serious and difficult condition of cats. Thus far, no adverse events following administration of the stem cells has occurred, though the project is still in the early stage. It is too soon to tell if the treatment is effective, but results from this study will provide evidence for or against the use of stem cells in inflammatory bowel disease.
